Education

Delhi Technological University — New Delhi, India
B.Tech in Computer Engineering; CGPA: 7.94/10 — *2023 – 2027*

Holy Cross Convent Sr. Sec. School — New Delhi, India
CBSE Class XII – 95%; CBSE Class X – 91.2% — *2022; 2020*

Research

Dynamask – Reproducing Perturbation-Based Saliency for Time-Series | *PyTorch* — Notebook

- Reimplemented the Dynamask framework (Crabbé & van der Schaar, ICML 2021) end-to-end in PyTorch, including the learnable perturbation mask, blur operator, and the fidelity + area/smoothness optimization objective.
- Benchmarked Dynamask, FO, FP, IG, and SHAP on time-series data; Dynamask achieved 0.698 AUR vs. 0.125–0.131 for others.
- Analyzed mask area/smoothness trade-offs against fidelity to identify the key time steps driving model predictions.
- Currently applying Dynamask to EEG classification to interpret which parts of the signal drive model predictions.

Experience

Backend Developer Intern — Dec 2025 – Jan 2026
Fixolutions Pvt. Ltd. | Node.js, Express.js, PostgreSQL — *Remote*

- Contributed to the backend of an after-sales service platform built from scratch as a monorepo powering 3 connected systems.
- Automated the slow, phone-based complaint registration process, letting customers raise service requests in a few clicks that are routed to the corresponding service center in under 5 minutes.
- Implemented technician assignment logic weighing 3+ factors: availability, proximity, workload, and service requirements.
- Built customer-facing repair features including real-time technician location tracking, a full diagnosis with cost breakdown, and two-way customer–technician ratings to improve accountability on both sides.

Web Developer Intern — Jun 2025 – Jul 2025
Upzeal Technologies Pvt. Ltd. | React.js, Django, DRF — *Remote*

- Designed the parking lot system with scalability in mind to support growth in lots, users, and bookings.
- Built 10+ reusable React components integrating the Google Maps API for real-time location search and booking.
- Implemented Google authentication via Firebase, streamlining manual account-verification workload.
- Designed scalable relational database models and built 5+ RESTful APIs in Django for booking and user data.

Projects

Trendsta – AI Content Research Tool for Creators | *Next.js, Prisma, PostgreSQL, n8n* — Live | GitHub

- Built a tool that crawls 100+ niche-specific posts per request via an n8n workflow to surface what's working for creators.
- Integrated Dodo Payments (Merchant of Record) for subscription billing with webhook handling and secure authentication.
- Engineered the interaction layer with the n8n research workflow to trigger and consume automated content analysis.
- Implemented 2 BullMQ background workflows for content analysis and email delivery, decoupling long jobs from requests.
- Applied the transactional outbox pattern to avoid dual writes, keeping database updates and published events consistent.

SAMAS | *Python, LangGraph, Pinecone, FastAPI, RAGAS, LangSmith* — GitHub | Live

- Designed a Proof Scoring Engine cross-verifying self-reported skills against scraped GitHub/LinkedIn evidence, orchestrated across 5 agents covering profiling, adaptive testing, search, JD analysis, and role tiering.
- Built Pinecone hybrid search (dense + BM25) to rank live listings against verified profiles, streaming agent state via SSE.
- Built a job-analysis pipeline that deduplicates listings across job boards, flags ghost postings, and maps each role's extracted requirements against the candidate's verified profile to rank roles as Easy Get, Best Match, or Stretch Goal.
- Instrumented RAGAS/LangSmith evaluation (faithfulness, relevancy, context precision all >89%) with 50+ student testers.

Technical Skills

Languages & Core CS: Python, JavaScript, TypeScript, C++ ,Object Oriented Principles, Operating Systems.
Backend & APIs: Node.js, Express.js, Django, DRF,REST APIs.
Databases & Messaging: PostgreSQL, Redis, Prisma ORM, BullMQ, Pinecone, Schema Design.
Frontend & GenAI: React.js, Next.js, LangChain, LangGraph, RAG, Hybrid Search, RAGAS, LangSmith, n8n.
Tools & Cloud: Git, GitHub, Postman, Firebase, Azure Blob Storage, Vercel.
ML/DL (Research): PyTorch, NumPy, Pandas, scikit-learn, Data Cleaning.
Problem Solving: Data Structures & Algorithms, 150+ problems solved on LeetCode (profile).

Certifications

Python – HackerRank (2020) (certificate) | **Intermediate JavaScript** – HackerRank (2025) (certificate)
